## Arsenal VG 33

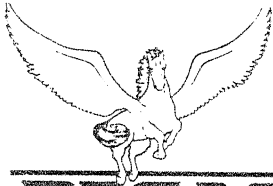

---

### CONSTRUCTION NOTES

1. Firstly separate all parts from the sprues, and clean off all flash, moulding marks.
2. Locate cockpit floor moulding, and attach the bucket seat and rear bulkhead. Next attach the instrument panel, and add the control column to the scribed portion of the floor, (Metal parts may be attached with any 'Cyano-Acrylate' adhesive such as Superglue).
3. Add the completed cockpit assembly and tailskid to the PORT fuselage half, when dry join fuselage halves and remove the joint line.
4. At this point attach the chin moulding to the front of the fuselage, making sure that it is a flush fit. When dry add the rudder & tailplanes, making sure that they are square when viewed from the front.
5. Next add the bottom wing to the cut out on the bottom of the fuselage, then add the top wing panels to this. When dry add the ventral radiator fairing, chin intake & ventral aerial to model.
6. Invert model and attach the U/C legs to the location points under the top wings, when dry add the cross braces & U/C doors.
7. Locate and attach the spinner & propeller moulding, and when dry add the top aerial.
8. Finally add the canopy moulding, paint model in accordance with the Colouring Notes, and add the transfers.

### TRANSFER APPLICATION

The transfers provided in this kit are hand printed using a modern sophisticated 'Silk Screen' process. This system is utilised because of its superior colour density when compared with usual mass produced 'Litho' transfer printing. Proprietary decal solvents must not be used with these transfers, they are unusually thin and must only be applied with Distilled water.
